Business Challenges

A Ma v a
a a a

Avon Machining was operating in silos. Company departments, including engineering, production, quality and accounting, each had its own Access databases and Excel spreadsheets. Databases were not integrated with each other, which made tracking, retrieving and communicating critical data very difficult and time-consuming. Company management realized that it needed a solution that could seamlessly integrate across the enterprise and provide easier access to real-time information. After reviewing and testing several options, the Plex Manufacturing Cloud® was selected because of its ability to connect and manage all areas of manufacturing operations.
